

V10 Application Protocol

General

- V10 is supplied in liquid form and should be stored in a cool place (4-10°C).
- Put on virus-free clothing before you start.
- Wear plastic gloves, with cotton gloves over the top if applicable.
- Use new or clean materials that are free from disinfectants.

Preparing V10

- Shake well.
- Dilute 0.8 L V10 with 8 L cold water (4-10°C) per ha. Use a clean bucket that is free from disinfectants.
- Stir the solution regularly.
- NB: V10 should be kept cool at all times.

Application method with scouring sponge

Rub the agent onto one leaf on every stem, just below the head and at medium height.

- Dip a scouring sponge into the V10 solution and moisten sufficiently.
- Rub the leaf with the rough side of the sponge (just below the head and at medium height). Rub with one hand while holding the other hand under the leaf to provide counter pressure.
- Make sure the scouring sponge remains sufficiently moist whilst applying V10 by regularly dipping it into the solution. Moisten the sponge at least every 10 treated plants.

Tip: This application method can also be carried out using spray bottles. Fill the bottle with the V10 solution. Spray the scouring sponge to moisten it sufficiently at least every 10 treated plants.

Application method with cotton gloves

Rub the agent onto one leaf on every stem, just below the head and at medium height.

- Put the cotton gloves on over the plastic gloves. Dip your thumb and index finger into the V10 solution and moisten sufficiently.
- Take a leaf between your thumb and index finger and rub or pinch it. The leaf surface should be damaged but be careful not to make holes in it.
- Make sure your thumb and index finger remain sufficiently moist whilst applying V10 by regularly dipping them into the solution. Moisten your fingers at least every 10 treated plants.

Tip: This application method can also be carried out using spray bottles. Fill the bottle with the V10 solution. Spray the gloves to moisten them sufficiently at least every 10 treated plants.

Important

- Avoid contact between the liquid and the skin.
- Do not drink the liquid.
- You can use V10 undiluted until the use-by date stated on the packaging. Once it is diluted, the solution should be used within a couple of hours.

- The effectiveness of V10 may be impacted by other products. Please check with Valto for more information.
- An instruction video showing the various application methods can be found on our YouTube channel (Valto BV) or via the QR code below.
